Classic Army M15A4 Carbine Review

An Airsoft AEG Rifle Review By: Blue_Helmet

Whats included in the box?

- Gun (AEG)
- manual
- barrel cleaner
- hi-cap magazine

Performance?

Pros:

- very rigid metal receiver
- weight is awesome (almost the same as the real stuff)
- everything is metal except for the retractable butt stock and the hand guard
- gearbox is robust
- metal bushings
- receiver has no ears
- gears are good (can be used as far as SP120)
- serial number makes it unique

Cons:

- magazine mis feeds (CA mags are terrible, better buy the china ones i already have 5mags and i seldom use the CA mags)
- motor is weak (cant even pull an SP120)
- low out-of-the-box fps (ave: 315fps)
- price (14k)
- Batteries not included (charger as well, had to buy myself a 9.6v 1700mah Sanyo NiCd and BOL basic charger)
- Paint chips off easily

ive been using this gun for quite a while now and did a basic upgrade..so far so good...

basic upgrade done:

-EG1000

-Airseal Nozzle

-SP120

-tightbarrel

Current FPS: 440fps (this is high considering i used only an SP120..thanks to HANS (Tuk's Airsoft)

external upgrade:

-GNP aimpoint (with OD rubber Cover and Plexiglas Protector)

-Vert grip

Hope this helps...
